3	CLOSE SETTLE \$0.00	The transactions have been settled for payment. Press [CANCEL] to return to the idle prompt

INDUSTRY INFORMATION

AVS (Address Verification Service) - A service designed to help reduce the possibility of fraud on Manually keyed transactions. The terminal will request the cardholder's billing address and or zip code. Entry of both address and zip code may provide better protection against fraud. If an "N" or an "X" is returned as one of the AVS codes, you may want to consider whether you want to accept the transaction, request additional ID from the customer or secure alternate means of payment. If you don't accept it then you must go back to void the transaction (see procedures for Adjust/Void Transaction). This information is required by MasterCard and VISA to help your business qualify for the best rates.

Card Code Validation - A service designed to help reduce the possibility of fraud on Card Not Present transactions. The 3 - 4 digit code printed on reverse italics on the signature stripe of the card should be entered when prompted. If the code is not entered, the user will be required to indicate why the prompt was bypassed.

Offline Sale - A captured transaction which does not dial out for authorization. Sometimes referred to as a forced transaction. Voice approval should be obtained for all offline sales. Note: If Commercial card processing is enabled, Commercial Card prompts will be displayed on all MasterCard® and VISA® transactions.

E-Commerce - A service design to help reduce the possibility of fraud on Internet transactions. The terminal will ask if the website that you used your card credit on is secure or not.

DEBIT

Use this function to capture transactions when voice approval has been obtained. Sometimes referred to as an offline transaction.

STEP	TERMINAL PROMPT	ACTION
